Zambian Ministry of
Health

Field of research:

Biomedicine

Leadership Program for Emerging African Women in Science

Advancing Biomedical Science and Community Health

The program equipped me with leadership skills
and the knowledge that I needed to be very
vigilant in research

Driven by a passion for impactful research, Christine Musonda is a biomedical scientist who specialises in the diagnosis of infectious and non-infectious diseases. She joined the AWARD Leadership Program for Emerging African Women in Science with the goal of improving her communication skills and to also effectively lead others in research. As a researcher who is actively involved with her community, she also sought to develop her community organisation skills.

Through the AWARD Leadership Program for Emerging African Women in Science, she has enhanced her leadership, public speaking, and grant writing abilities. "The program equipped me with leadership skills and the knowledge that I needed to be very vigilant in research," she says.

Christine aspires to conduct groundbreaking research, secure funding for community challenges and mentor future scientists, fostering positive change in her community.

The AWARD Leadership Program for Emerging African Women in Agricultural Sciences is funded by the Carnegie Corporation of New York (CCNY) and implemented by AWARD.
