Emerging African Women in  
Agricultural Sciences is funded by the  
Carnegie Corporation of New York  
(CCNY) and implemented by AWARD.

## Leadership Program for Emerging African Women in Science

### Advancing Food Systems Transformation

I encourage you to join the program and to grasp  
all knowledge you can and use it to develop your  
professional and scientific career

With an academic background at the intersection of human nutrition and post disaster development, Fatima Mohamed Suleman joined the AWARD Leadership Program for Emerging African Women in Science with the goal of strengthening her leadership skills and advancing her career in science. Fatima's research background is in learning the methodologies and frameworks to analyse food and nutrition, stakeholders mapping and analysis, food systems transformation and livelihood assessments.

Dedicated to addressing the needs of society through improved human knowledge, Fatima said her participation in the program enabled her to carve out her trajectory for sustainable professional development and also sparked in her the desire to share the knowledge she gained with young Somali scientists.

To young women considering joining the AWARD Leadership Program for Emerging African Women in Science, Fatima says, "I encourage you to join the program and to grasp all knowledge you can and use it to develop your professional and scientific career."
