Leadership Program for Emerging African Women in Science

Evidence-Based Interventions for Improved Nutrition

By focusing on evidence-based interventions, I strive to bridge the gap between research and practice

With a background in public health nutrition, Olutayo Toromade's research seeks to identify evidence-based interventions that effectively reduce malnutrition and improve nutrition outcomes. "By focusing on evidence-based interventions, I strive to bridge the gap between research and practice," she says.

Olutayo joined the AWARD Leadership Program for Emerging African Women in Science seeking to develop essential leadership skills that would enable her to excel in her career and contribute effectively to the scientific community. She additionally wanted to engage with a diverse community of accomplished scientists, mentors, and peers from across Africa to broaden her perspectives.

Olutayo says, "The program has empowered me to effectively contribute to evidence-based policy formulation, advocate for improved nutrition outcomes, and make a meaningful impact in shaping public health initiatives."

The AWARD Leadership Program for Emerging African Women in Agricultural Sciences is funded by the Carnegie Corporation of New York (CCNY) and implemented by AWARD.
